

Test-Optional Admissions

Dessein, Frankel, Kartik

Discussion by Adam Kapor, Princeton University

September 2, 2023

Why have colleges adopted test-optional and/or test-blind admissions?

Why have colleges adopted test-optional and/or test-blind admissions?

- Important topic and RQ:

Why have colleges adopted test-optional and/or test-blind admissions?

- Important topic and RQ:
 - ▶ Many colleges adopted test-optional admissions during COVID.

Why have colleges adopted test-optional and/or test-blind admissions?

- Important topic and RQ:
 - ▶ Many colleges adopted test-optional admissions during COVID.
 - ▶ But now that testing is cheap again, these policies have persisted.

Why have colleges adopted test-optional and/or test-blind admissions?

- Important topic and RQ:
 - ▶ Many colleges adopted test-optional admissions during COVID.
 - ▶ But now that testing is cheap again, these policies have persisted.
 - ▶ Why would colleges want to commit not to learn something they care about?

Why have colleges adopted test-optional and/or test-blind admissions?

- Important topic and RQ:
 - ▶ Many colleges adopted test-optional admissions during COVID.
 - ▶ But now that testing is cheap again, these policies have persisted.
 - ▶ Why would colleges want to commit not to learn something they care about?
- This paper's argument does not rely on:

Why have colleges adopted test-optional and/or test-blind admissions?

- Important topic and RQ:
 - ▶ Many colleges adopted test-optional admissions during COVID.
 - ▶ But now that testing is cheap again, these policies have persisted.
 - ▶ Why would colleges want to commit not to learn something they care about?
- This paper's argument does not rely on:
 - ▶ Changes in applicant pool (held fixed in this paper)

Why have colleges adopted test-optional and/or test-blind admissions?

- Important topic and RQ:
 - ▶ Many colleges adopted test-optional admissions during COVID.
 - ▶ But now that testing is cheap again, these policies have persisted.
 - ▶ Why would colleges want to commit not to learn something they care about?
- This paper's argument does not rely on:
 - ▶ Changes in applicant pool (held fixed in this paper)
 - ▶ Endogenous test-prep effort (e.g. muddled information; multitasking; ...)

Why have colleges adopted test-optional and/or test-blind admissions?

- Important topic and RQ:
 - ▶ Many colleges adopted test-optional admissions during COVID.
 - ▶ But now that testing is cheap again, these policies have persisted.
 - ▶ Why would colleges want to commit not to learn something they care about?
- This paper's argument does not rely on:
 - ▶ Changes in applicant pool (held fixed in this paper)
 - ▶ Endogenous test-prep effort (e.g. muddled information; multitasking; ...)
- Main result: convex *“disagreement costs”* can motivate colleges to drop exams.

Why have colleges adopted test-optional and/or test-blind admissions?

- Important topic and RQ:

- Main result: convex *“disagreement costs”* can motivate colleges to drop exams.
 - 1 A college can replicate its “test-optional” assignment w/ test-required
 - 2 But in doing so it may reject people society wants it to admit, or vice versa.
 - 3 Obscuring scores prevents society from finding the cases of extreme disagreement.

Why have colleges adopted test-optional and/or test-blind admissions?

- Important topic and RQ:
 - ▶ Many colleges adopted test-optional admissions during COVID.
 - ▶ But now that testing is cheap again, these policies have persisted.
 - ▶ Why would colleges want to commit not to learn something they care about?
- This paper's argument does not rely on:
 - ▶ Changes in applicant pool (held fixed in this paper)
 - ▶ Endogenous test-prep effort (e.g. muddled information; multitasking; ...)
- Main result: convex *“disagreement costs”* can motivate colleges to drop exams.
 - 1 A college can replicate its “test-optional” assignment w/ test-required
 - 2 But in doing so it may reject people society wants it to admit, or vice versa.
 - 3 Obscuring scores prevents society from finding the cases of extreme disagreement.
 - 4 Application: society bans AA \implies colleges may drop SAT, harming society.

Colleges say the purpose of SAT-optional is to improve the applicant pool.

The test-optional policy should strengthen and diversify an already outstanding applicant pool and will broaden access for those high-achieving students who have historically been underrepresented at selective colleges and universities.... – GWU administrator, quoted in paper.

Colleges say the purpose of SAT-optional is to improve the applicant pool.

The test-optional policy should strengthen and diversify an already outstanding applicant pool and will broaden access for those high-achieving students who have historically been underrepresented at selective colleges and universities.... – GWU administrator, quoted in paper.

- Whether this “works” depends on who selects in; quality of other signals

Colleges say the purpose of SAT-optional is to improve the applicant pool.

The test-optional policy should strengthen and diversify an already outstanding applicant pool and will broaden access for those high-achieving students who have historically been underrepresented at selective colleges and universities.... – GWU administrator, quoted in paper.

- Whether this “works” depends on who selects in; quality of other signals
 - ▶ Texas Top Ten (incidentally, involving partial commitment) seemed to “work” in practice (Black, Denning, Rothstein)

Colleges say the purpose of SAT-optional is to improve the applicant pool.

The test-optional policy should strengthen and diversify an already outstanding applicant pool and will broaden access for those high-achieving students who have historically been underrepresented at selective colleges and universities.... – GWU administrator, quoted in paper.

- Whether this “works” depends on who selects in; quality of other signals
 - ▶ Texas Top Ten (incidentally, involving partial commitment) seemed to “work” in practice (Black, Denning, Rothstein)
 - ▶ Mini-lit on SAT-optional (mostly liberal-arts) colleges; apps up but no impact on URM enrollment (Belasco et al (2015); Sweitzer et al (2018); Rosinger and Ford (2019); Saboe and Terrizzi (2019); Bennett (2022) is a partial exception.)

Colleges say the purpose of SAT-optional is to improve the applicant pool.

The test-optional policy should strengthen and diversify an already outstanding applicant pool and will broaden access for those high-achieving students who have historically been underrepresented at selective colleges and universities.... – GWU administrator, quoted in paper.

- Whether this “works” depends on who selects in; quality of other signals
 - ▶ Texas Top Ten (incidentally, involving partial commitment) seemed to “work” in practice (Black, Denning, Rothstein)

 - ▶ Borghesan (2023): (1) SAT is informative and not more biased than other measures; (2) dropping it in eqbm would harm elite colleges; not help minorities.

Uncertainty about what college wants

We hope the test-optional policy sends a message to prospective students that if you are smart, hard-working and have challenged yourself in a demanding high school curriculum, there could be a place for you here.... We want outstanding students from all over the world and from all different backgrounds—regardless of their standardized scores—to recognize GW as a place where they can thrive.

- GWU administrator, same source as quoted in paper.

Uncertainty about what college wants

We hope the test-optional policy sends a message to prospective students that if you are smart, hard-working and have challenged yourself in a demanding high school curriculum, there could be a place for you here.... We want outstanding students from all over the world and from all different backgrounds—regardless of their standardized scores—to recognize GW as a place where they can thrive.

- GWU administrator, same source as quoted in paper.
 - Colleges seem to cultivate uncertainty (ambiguity?) about admissions prefs...

Uncertainty about what college wants

We hope the test-optional policy sends a message to prospective students that if you are smart, hard-working and have challenged yourself in a demanding high school curriculum, there could be a place for you here.... We want outstanding students from all over the world and from all different backgrounds—regardless of their standardized scores—to recognize GW as a place where they can thrive.

- GWU administrator, same source as quoted in paper.
 - Colleges seem to cultivate uncertainty (ambiguity?) about admissions prefs...
 - Perhaps declaring test-optional provides info about *what college wants?*

Uncertainty about what college wants

We hope the test-optional policy sends a message to prospective students that if you are smart, hard-working and have challenged yourself in a demanding high school curriculum, there could be a place for you here.... We want outstanding students from all over the world and from all different backgrounds—regardless of their standardized scores—to recognize GW as a place where they can thrive.

- GWU administrator, same source as quoted in paper.
 - Colleges seem to cultivate uncertainty (ambiguity?) about admissions prefs...
 - Perhaps declaring test-optional provides info about *what college wants?*
 - Empirically, doesn't look like this has worked out so far, except perhaps in cases involving *legal* commitment + transparency (e.g. TTP).

You don't persuade people by telling them they're wrong.
You persuade them by gerrymandering their beliefs.

You don't persuade people by telling them they're wrong.

You persuade them by gerrymandering their beliefs.

- So how do theorists make an agent want to commit to not generate some info?

You don't persuade people by telling them they're wrong.

You persuade them by gerrymandering their beliefs.

- So how do theorists make an agent want to commit to not generate some info?
- Make agent's payoff concave in information.

You don't persuade people by telling them they're wrong.

You persuade them by gerrymandering their beliefs.

- So how do theorists make an agent want to commit to not generate some info?
- Make agent's payoff concave in information.
- This paper does so via a convex "disagreement cost", evaluated at expectation

You don't persuade people by telling them they're wrong.

You persuade them by gerrymandering their beliefs.

- So how do theorists make an agent want to commit to not generate some info?
- Make agent's payoff concave in information.
- This paper does so via a convex "disagreement cost", evaluated at expectation
 - ▶ "sender" chooses action, but pays cost if "receiver" disagrees

You don't persuade people by telling them they're wrong.

You persuade them by gerrymandering their beliefs.

- So how do theorists make an agent want to commit to not generate some info?
- Make agent's payoff concave in information.
- This paper does so via a convex “disagreement cost”, evaluated at expectation
 - ▶ “sender” chooses action, but pays cost if “receiver” disagrees

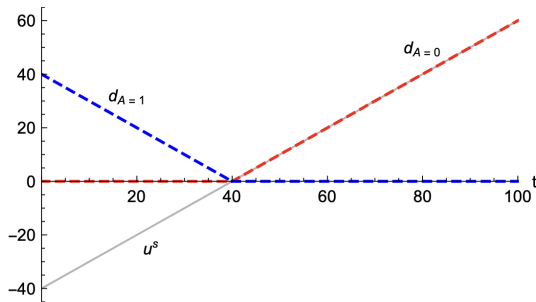

Figure 1 – Disagreement cost from accepting ($A = 1$) and rejecting ($A = 0$) an student.

Where do disagreement costs come from?

Where do disagreement costs come from?

- Two features of disagreement costs:

Where do disagreement costs come from?

- Two features of disagreement costs:
 - 1 zero if college, society agree on (binary) decision, otherwise $\propto |\text{disagreement}|$.

Where do disagreement costs come from?

- Two features of disagreement costs:
 - 1 zero if college, society agree on (binary) decision, otherwise $\propto |\text{disagreement}|$.
 - 2 Evaluated at expected value | available info.

Where do disagreement costs come from?

- Two features of disagreement costs:
 - 1 zero if college, society agree on (binary) decision, otherwise $\propto |\text{disagreement}|$.
 - 2 Evaluated at expected value | available info.
- \implies Not simply college's preferences over entering class \neq society's.

Where do disagreement costs come from?

 - ▶ “Ego utility” (Koszegi 2006): to get a candidate not to learn own score, make payoff concave in $E(\text{score})$.
 - ▶ Journalism and litigation worse for colleges if there are obvious cases.

How can colleges design society's information?

- 1 Managing society's beliefs is easier if scores *are not produced at all*.

How can colleges design society's information?

- 1 Managing society's beliefs is easier if scores *are not produced at all*.
 - ▶ should interpret college in this paper as coalition of all colleges (I think).

How can colleges design society's information?

- 1 Managing society's beliefs is easier if scores *are not produced at all*.
 - ▶ should interpret college in this paper as coalition of all colleges (I think).
 - ▶ Aside: paper mentions 25 states (but not CA, NY) require SAT/ACT for high school graduation. Couldn't society see these?

How can colleges design society's information?

 - ▶ If run by a single elite college, why not make scores "1" or "0"? (Compare AP exams).
 - ▶ U.S. has competing private exams, unlike other countries w/ national college entrance exams.

Does competition among colleges matter?

- Empirical DiD lit is about individual small colleges dropping exams; this paper is about a monopolist.

Does competition among colleges matter?

- Empirical DiD lit is about individual small colleges dropping exams; this paper is about a monopolist.
- Are SAT-optional decisions by colleges strategic complements?

Does competition among colleges matter?

- Empirical DiD lit is about individual small colleges dropping exams; this paper is about a monopolist.
- Are SAT-optional decisions by colleges strategic complements?
 - ▶ If apps costly, not using SAT scores can induce more apps.

Does competition among colleges matter?

- Empirical DiD lit is about individual small colleges dropping exams; this paper is about a monopolist.
- Are SAT-optional decisions by colleges strategic complements?
 - ▶ If apps costly, not using SAT scores can induce more apps.
 - ▶ Value of taking SAT falls if fewer colleges use it.

Does competition among colleges matter?

- Empirical DiD lit is about individual small colleges dropping exams; this paper is about a monopolist.
- Are SAT-optional decisions by colleges strategic complements?
 - ▶ If apps costly, not using SAT scores can induce more apps.
 - ▶ Value of taking SAT falls if fewer colleges use it.
 - ▶ If test-prep costly, then a college, j , going test-optional can reduce returns to effort for people who like j .

- Are SAT-optional decisions by colleges strategic complements?
 - ▶ If apps costly, not using SAT scores can induce more apps.
 - ▶ Value of taking SAT falls if fewer colleges use it.
 - ▶ If test-prep costly, then a college, j , going test-optional can reduce returns to effort for people who like j .
- Is world in 2023 very different from 2018? Maybe we want model with multiple eqba?

Conclusions

- This paper: colleges are designing the information that society uses to judge them, at some cost.

Conclusions

- This paper: colleges are designing the information that society uses to judge them, at some cost.
 - ▶ My view: worth pursuing this channel!
 - ▶ Empirical lit: SAT-optional hasn't increased diversity or ability of entering class so far.
 - ▶ This suggests that we should look for alternative explanations.

Conclusions

- This paper: colleges are designing the information that society uses to judge them, at some cost.
 - ▶ My view: worth pursuing this channel!
 - ▶ Empirical lit: SAT-optional hasn't increased diversity or ability of entering class so far.
 - ▶ This suggests that we should look for alternative explanations.
 - ▶ Seems very plausible that colleges are trying to hide info used to make decisions.

Conclusions

- This paper: colleges are designing the information that society uses to judge them, at some cost.
 - ▶ My view: worth pursuing this channel!
 - ▶ Empirical lit: SAT-optional hasn't increased diversity or ability of entering class so far.
 - ▶ This suggests that we should look for alternative explanations.
 - ▶ Seems very plausible that colleges are trying to hide info used to make decisions.
 - ▶ This paper shows how to get this story to work in equilibrium.

Conclusions
